Project Updates

Agenda

- ☐ Project Updates
- ☐ Requirements
- ☐ Architecture & UML
- ☐ GRASP Patterns
- ☐ Frameworks
- ☐ Test Cases
- ☐ Mockups

i3 Requirements

Requirement #	Description
I0	A single installer file must facilitate all transfers of resources between the server and the mobile device.
I10	A progress bar must inform the user of remaining install items and predicted wait to complete installation.
C0	The container must be able to host multiple instances of the game application simultaneously.
B0	The client browser must have javascript enabled to view the web site.
OS0	The server must the most current version of JRE installed.
Pt0	The design shall adhere to a principle of high cohesion.
Pt10	A principle of reusable code will be adopted as much as possible. Reusable classes should be implemented.

i3 Requirements(cont.)

Requirement

Description

Ar0

Sprites and animations should be cached if they are used more than once in the program.

GP200

Signals and data may be exchanged between state, but a change in state will present a different set of options for the user.

GP210

A character select state will be made available that allows both players to make a character selection before the game is started, and that starts after the last player selects a character.

GP220

A matchmaking state will search for players also in the matchmaking state before turning to character select.

GP230

A pause state will save the current view and its components but discontinue processing events and inputs.

GP240

A resume state will retrieve the save state of the current view and its components before initializing the processing of events and inputs.

S310

The web application view of the game will be available in minimized and full screen modes.

i3 Requirements(cont.)

Requirement

Description

S400

The administrator must be able to add new maps to be used as assets.

S401

The administrator must be able to place enemies, blocks and decorations within levels that can be later accessed by players.

S402

The administrator must be able to add new enemies as assets and determine their behavior for the gameplay experience.

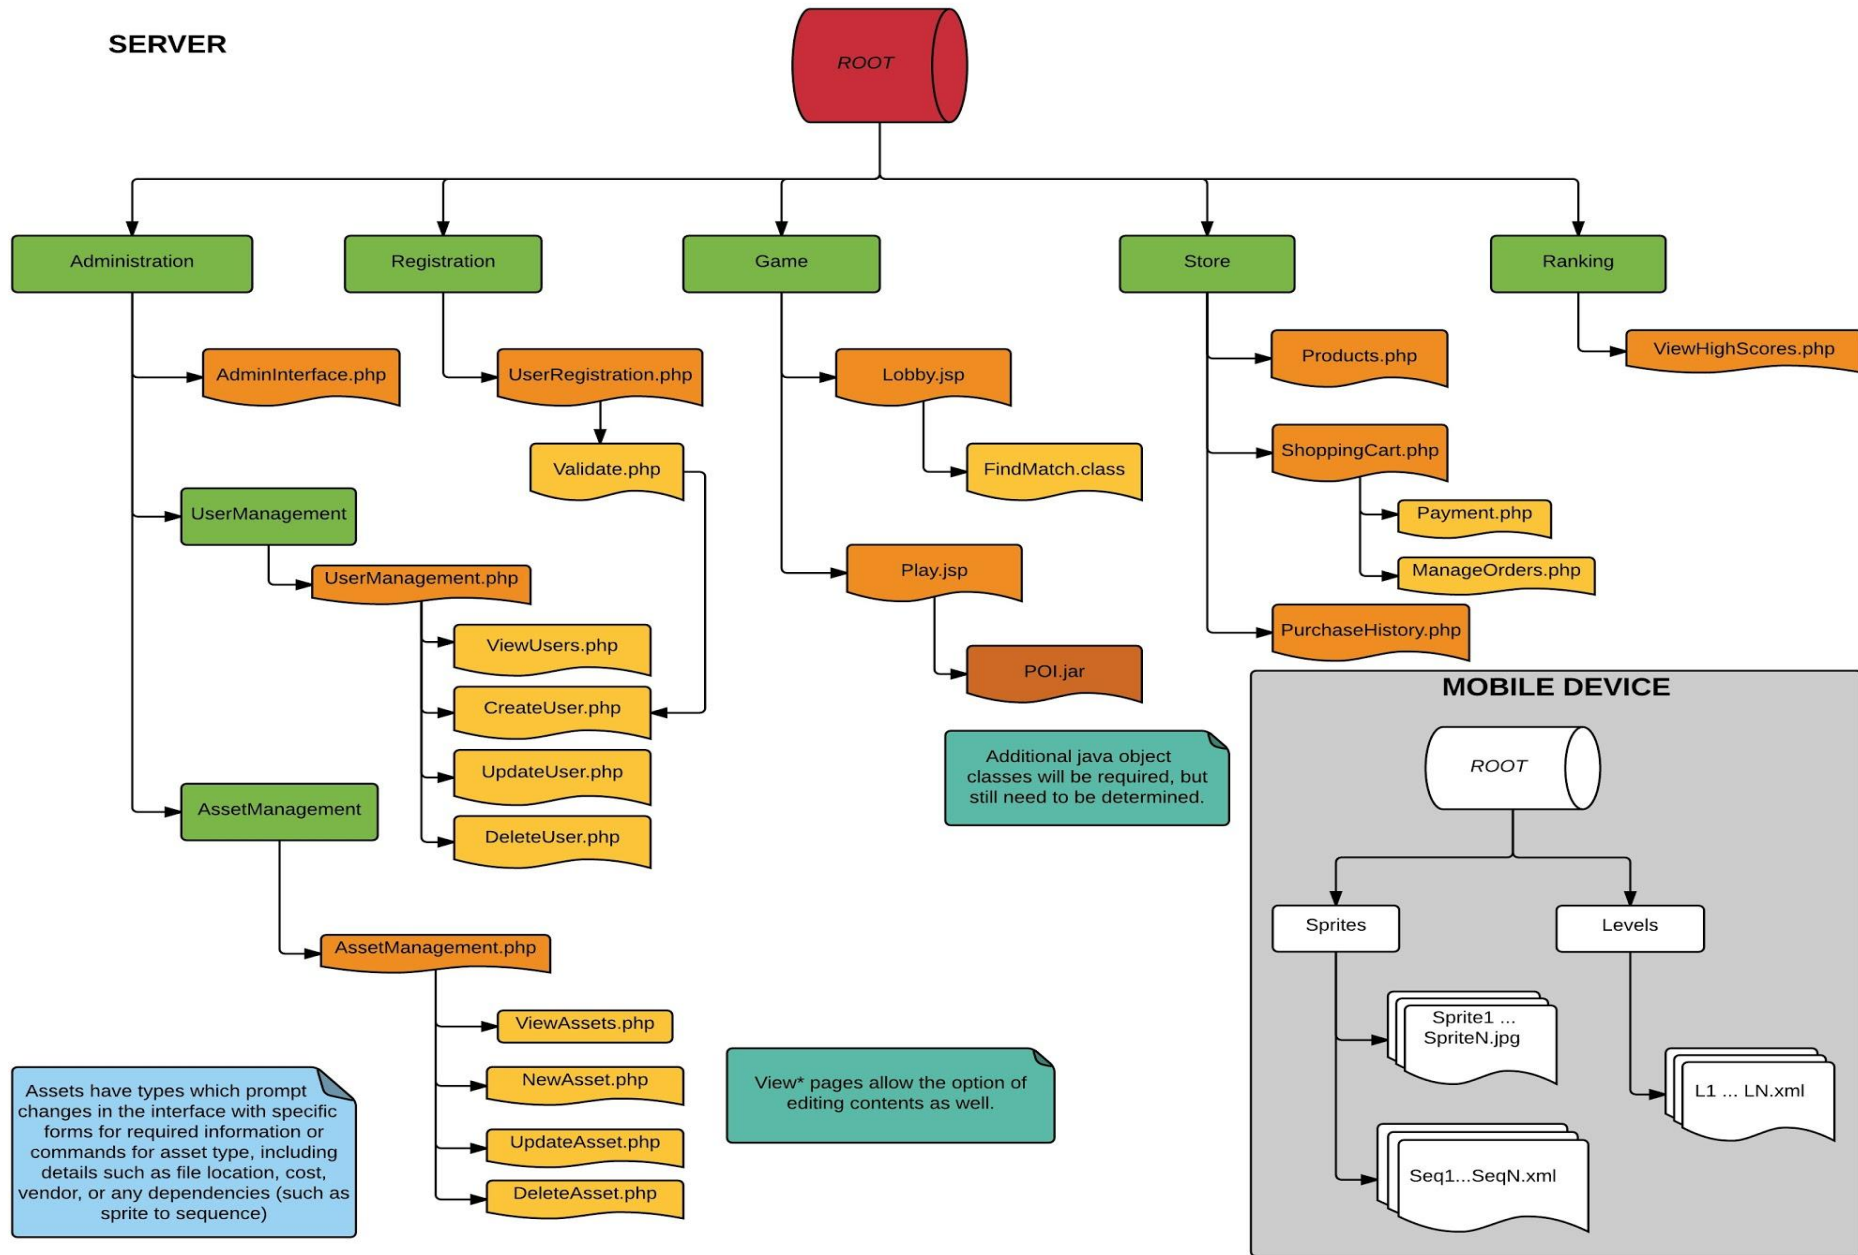

Architecture

A pixelated illustration of a building with a sign that says "GHOST HOUSE". The building has multiple windows and a large double door. The scene is set against a dark background with some clouds and a green bush in the foreground.

Class
Communications
Directory Tree
Shared Resources
Event Handling
Dynamic Process
UML
Sequences

Architecture - Directory Tree

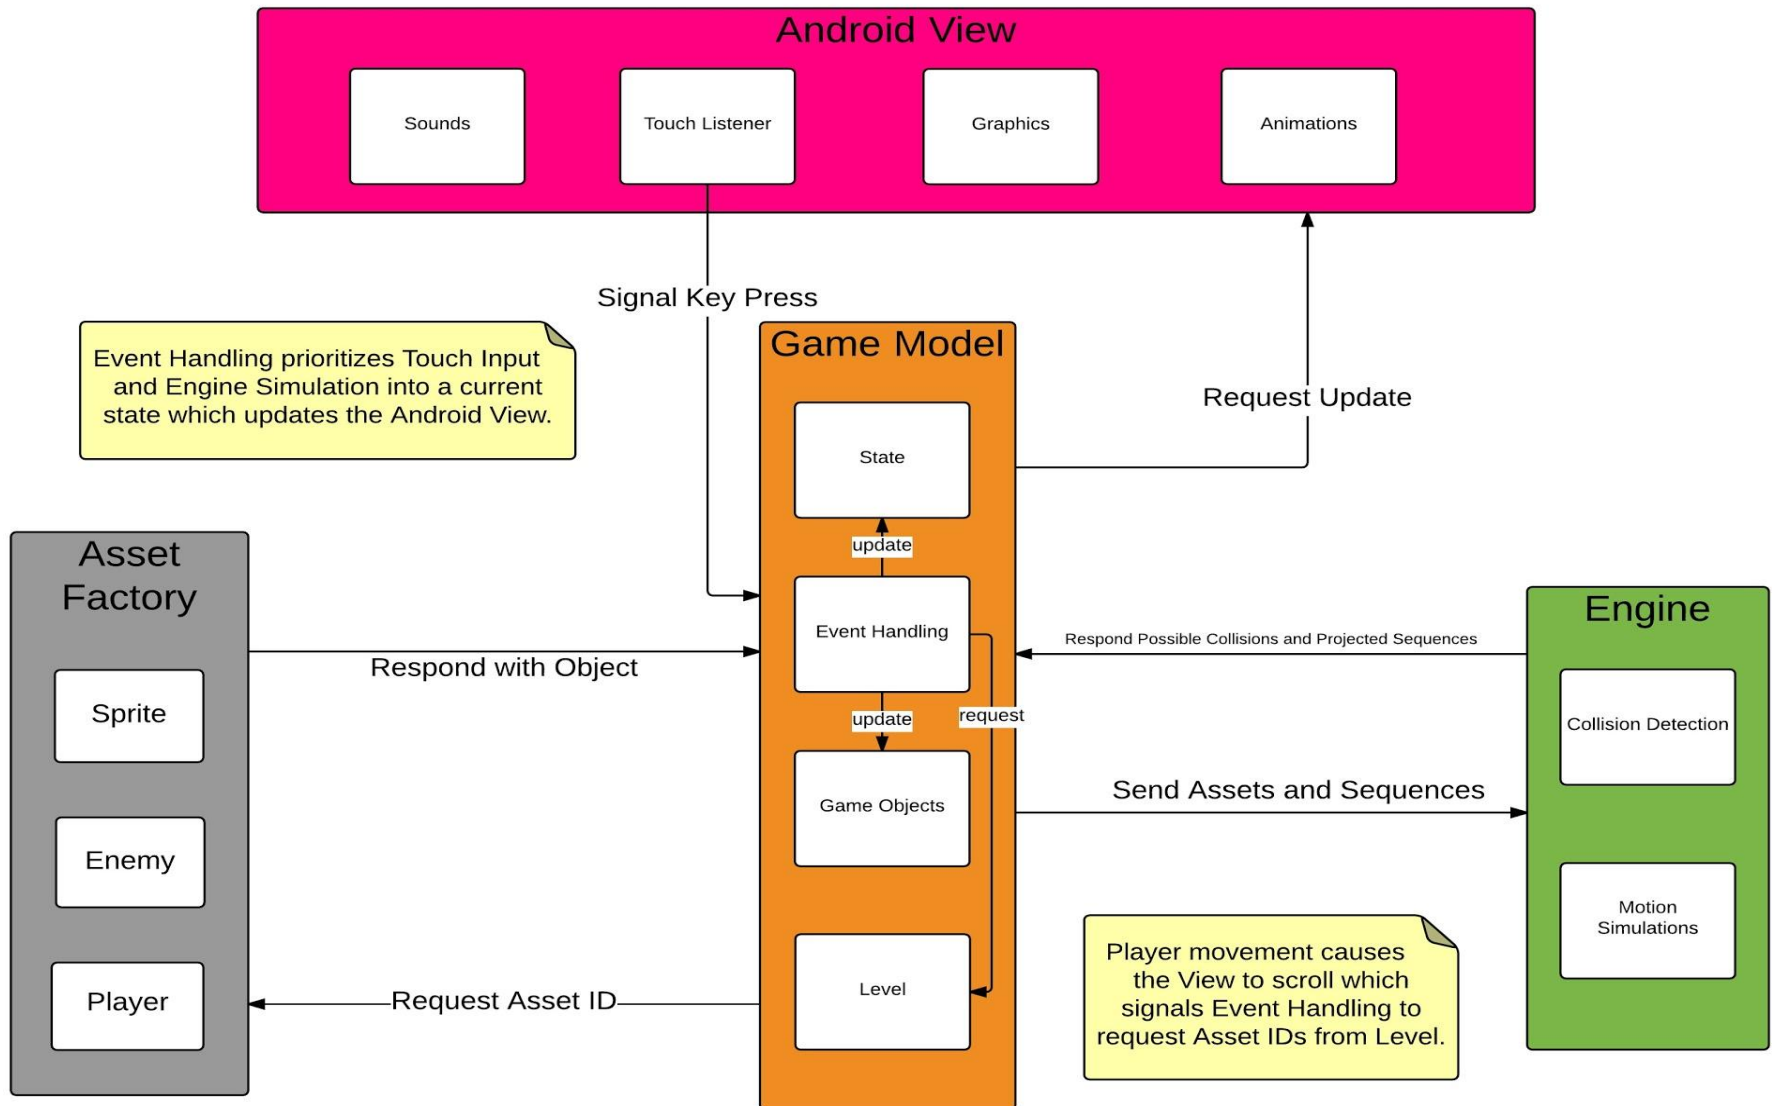

Data Retention

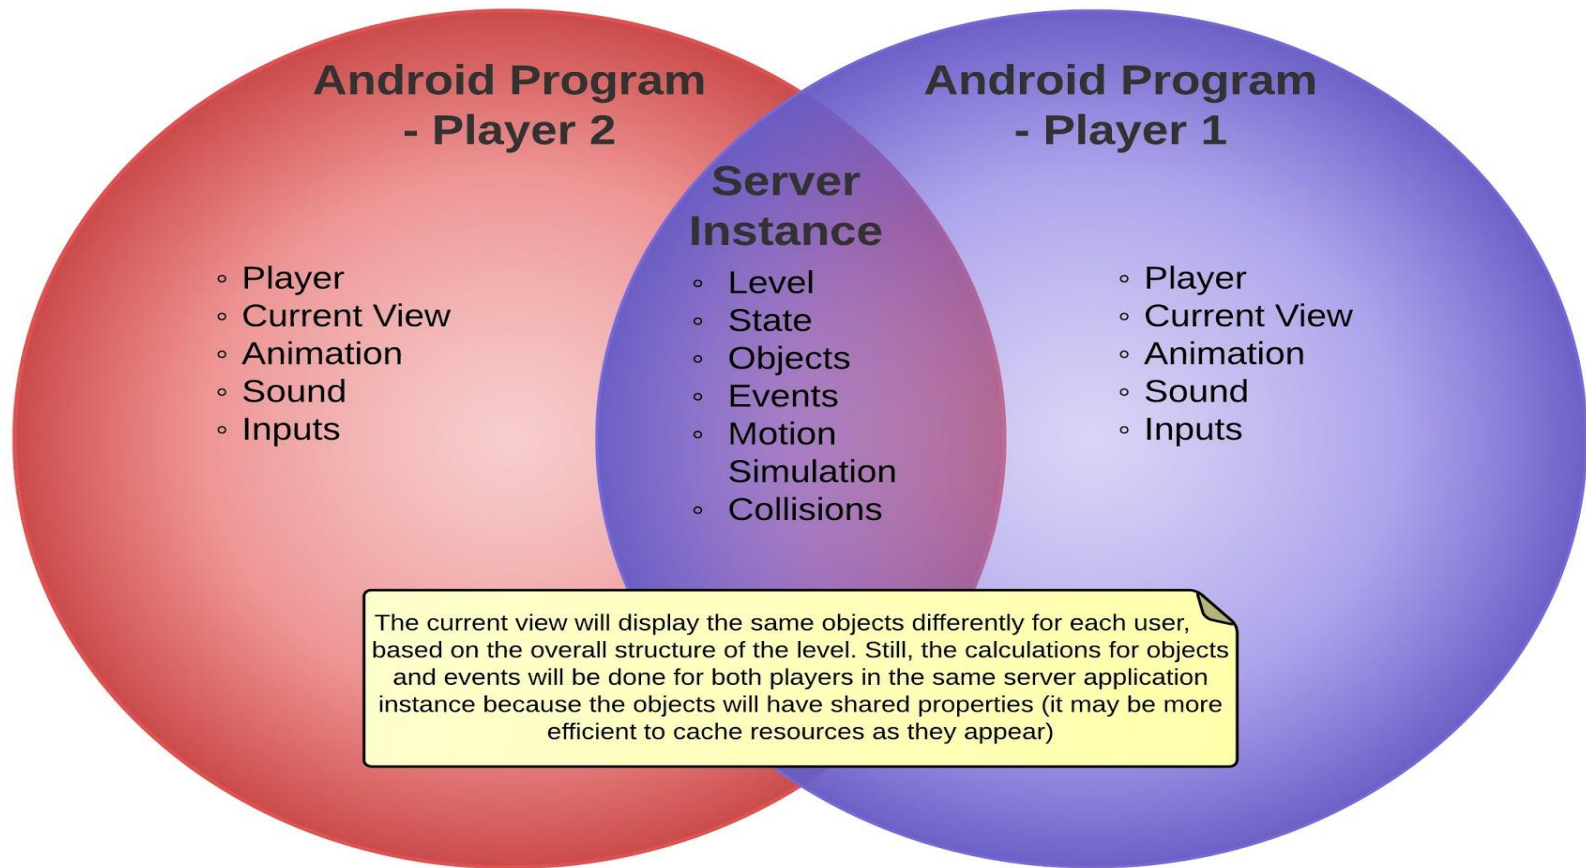

Match history - retain for 30 days

User accounts - remove after 1 year of last login

Architecture - Class Communications Diagram

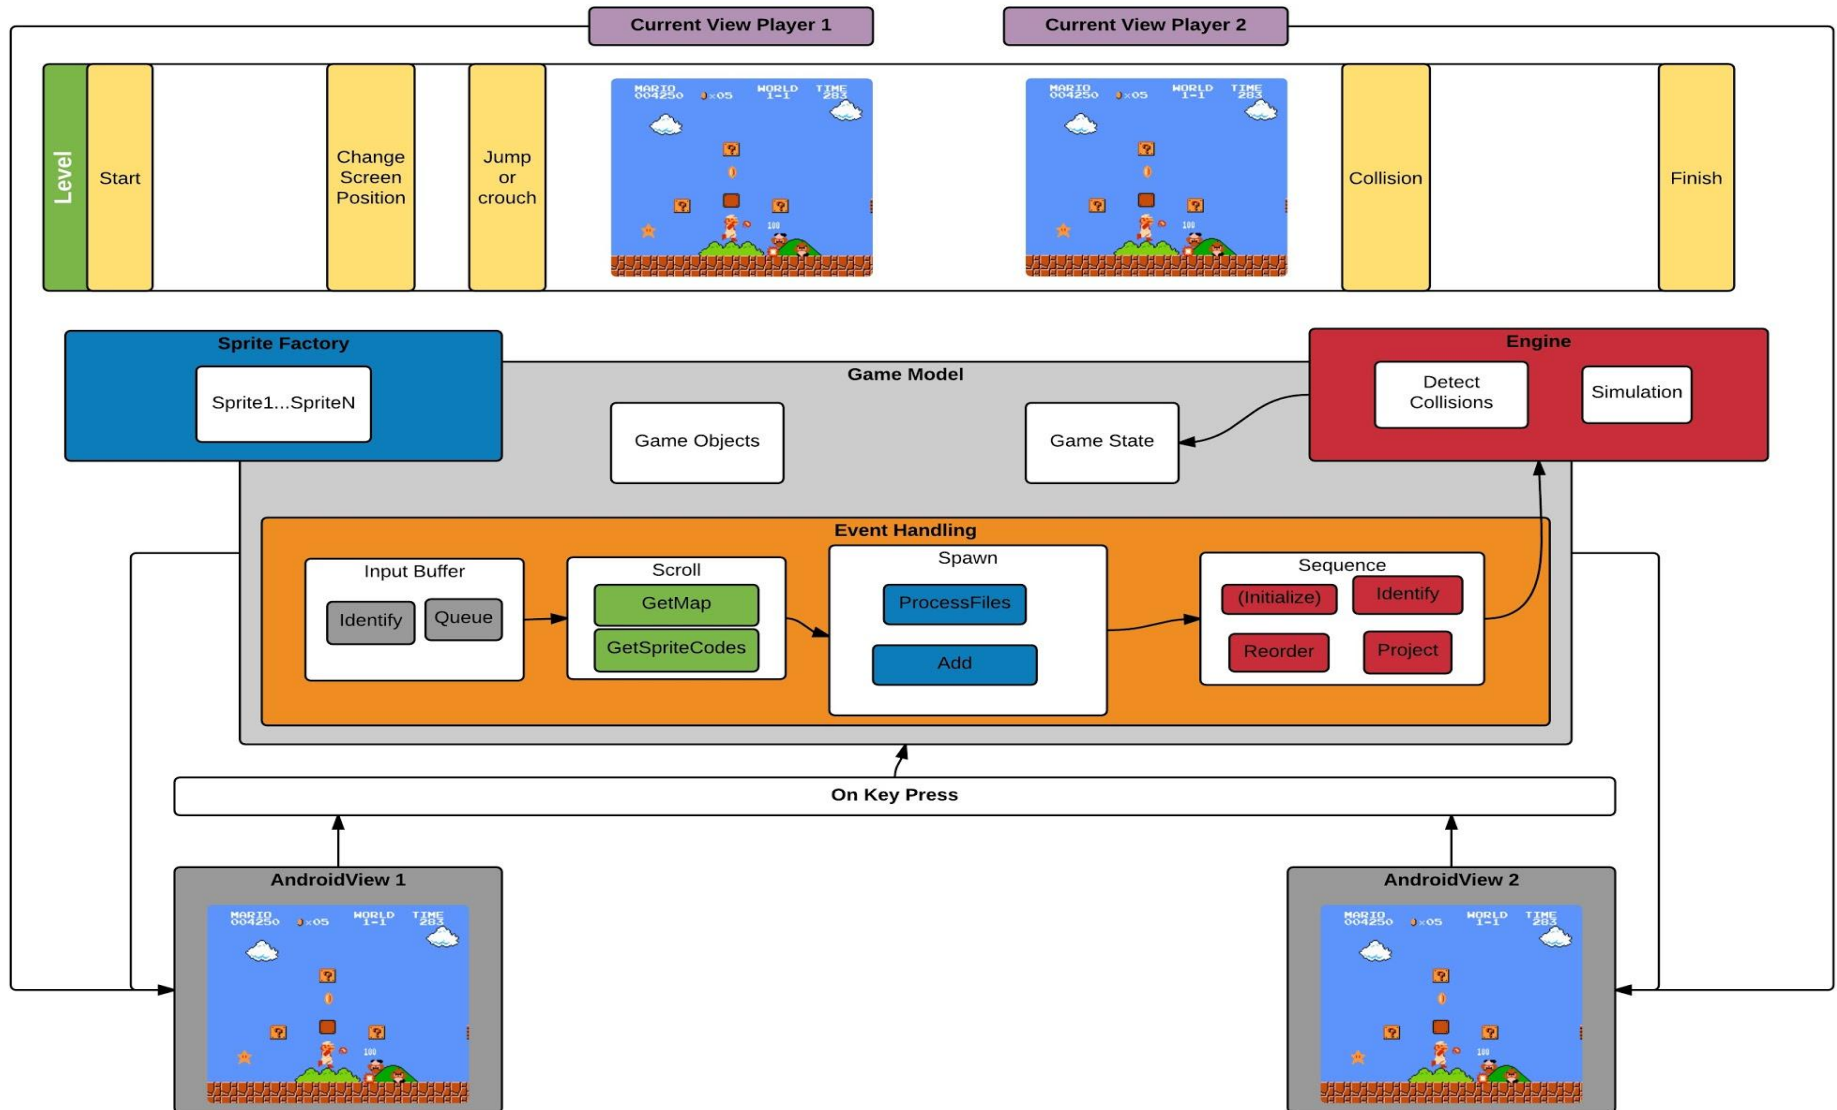

Architecture - Shared Resources Venn Diagram

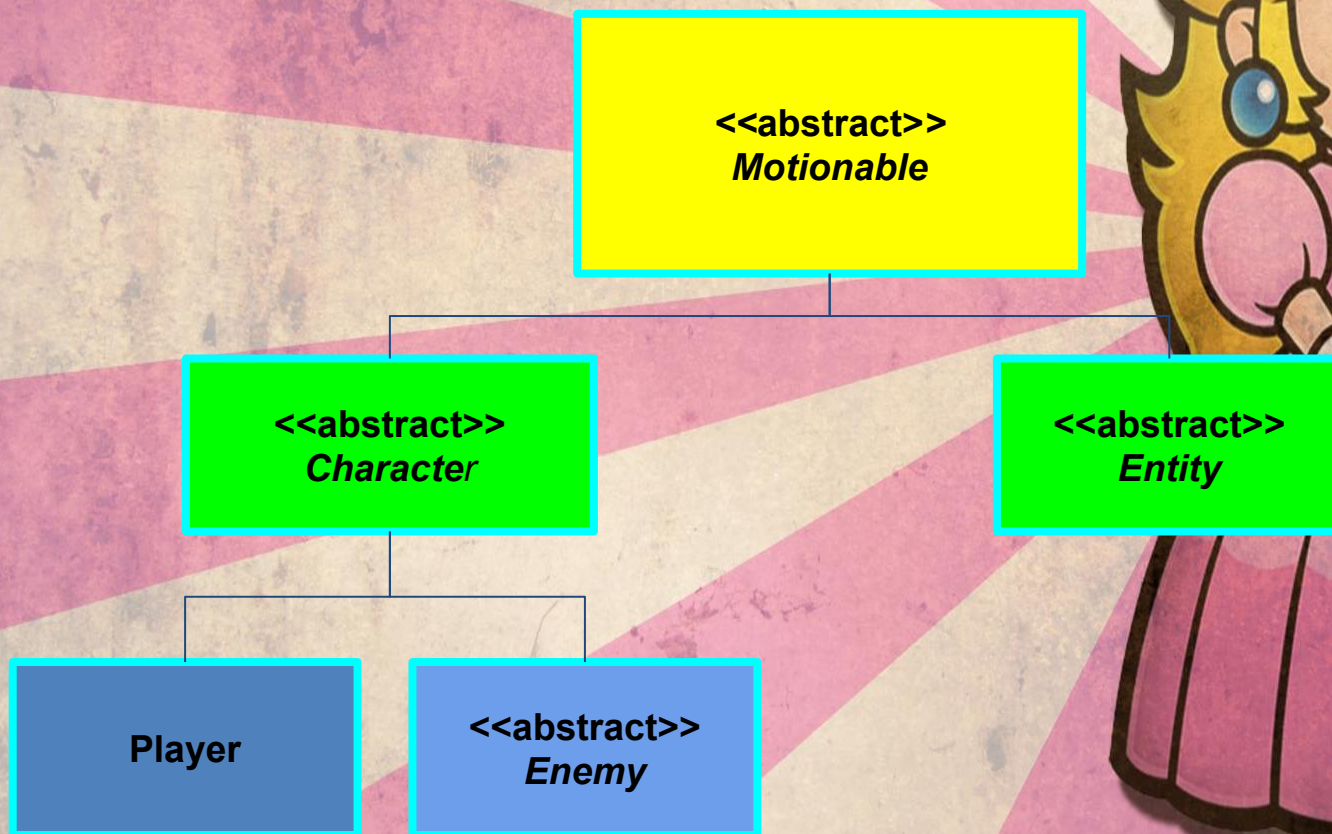

Architecture - Dynamic Process Diagram

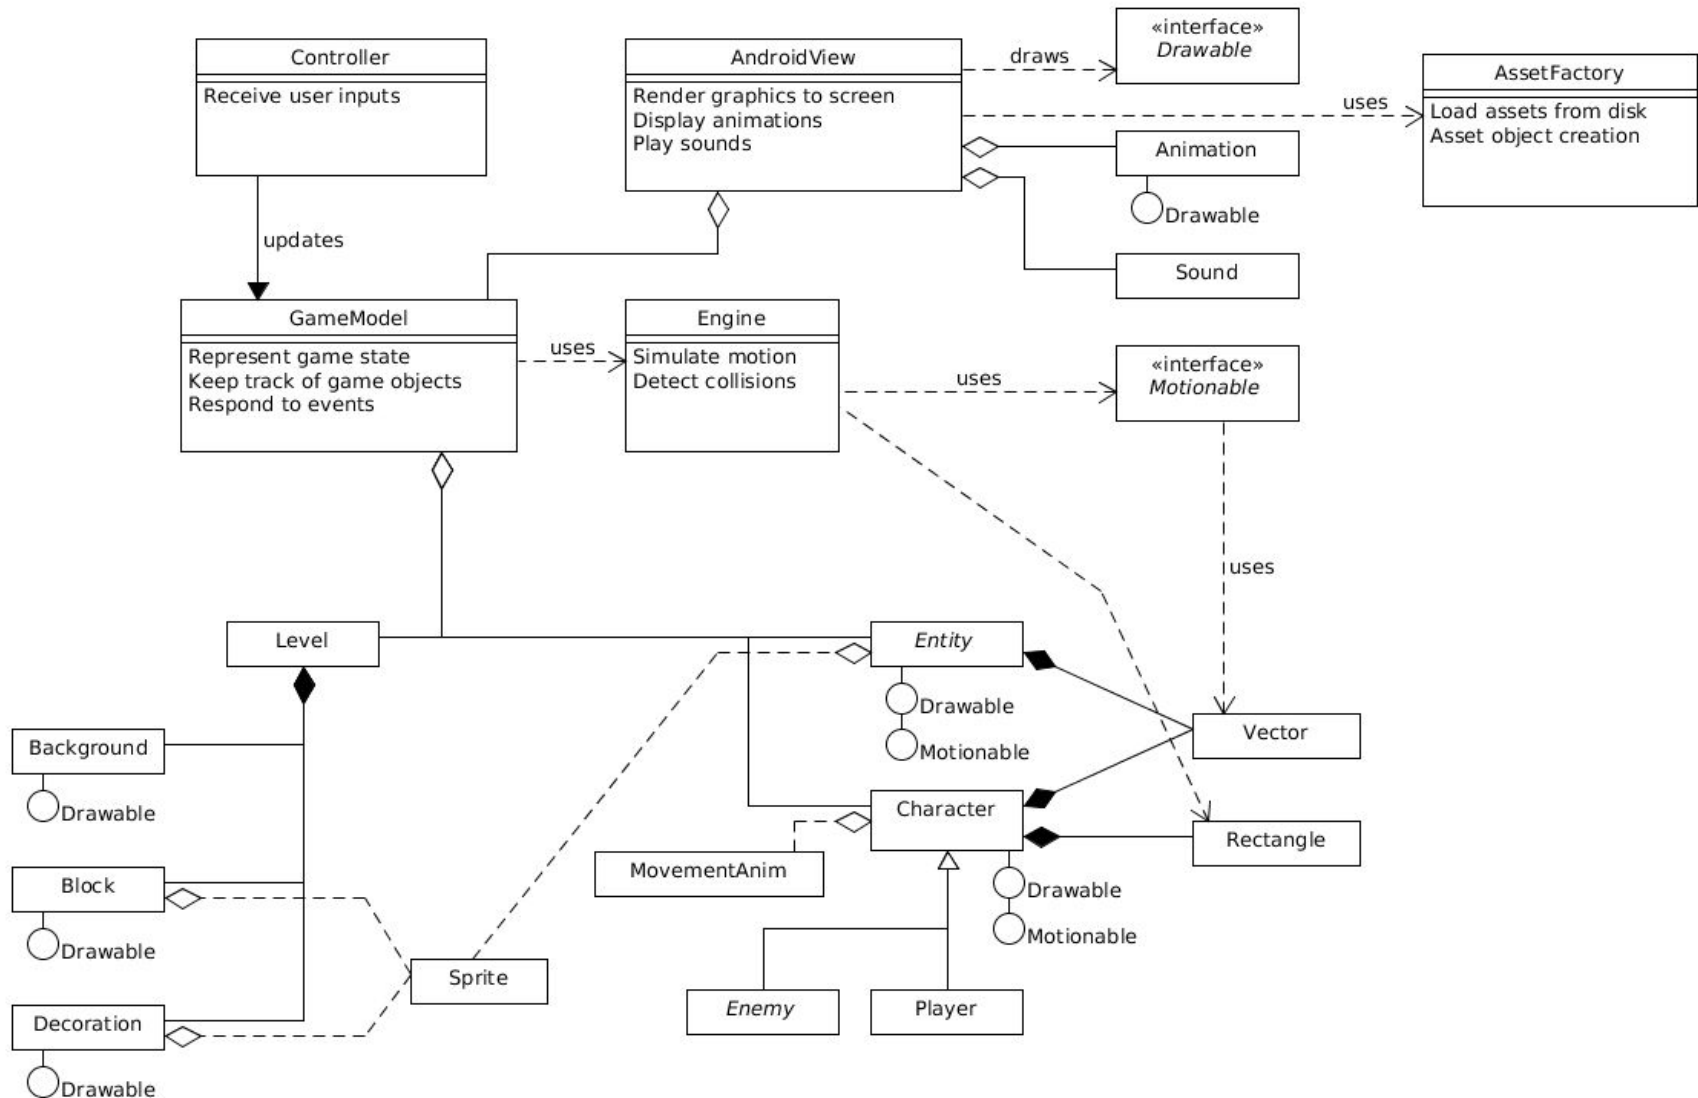

Event Handler

UML - Inheritance Model

UML - Class diagram (v3)

GRASP Patterns

High Cohesion @ All

**Low Coupling @
Motionable**

**Factory @
AssetFactory**

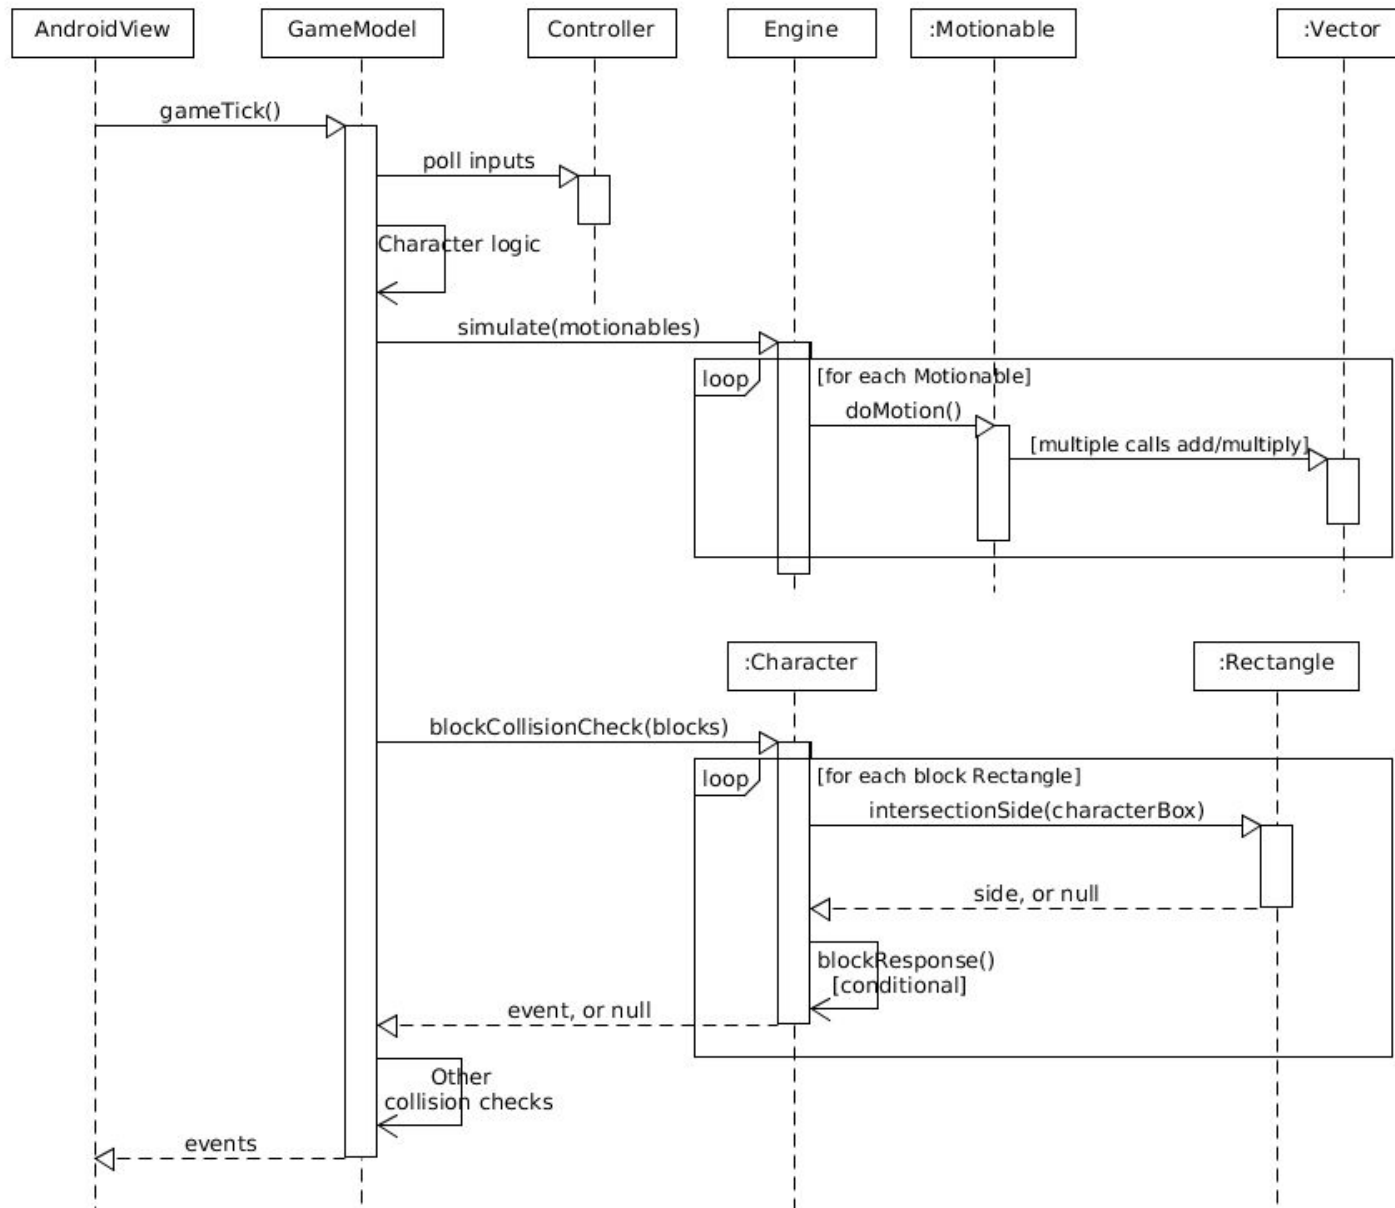

**Polymorphism @
Character**

**Creator @ Game
Model**

**Information Expert
@ Game Model**

Architecture - Sequences

Frameworks

Node.js

- Scalable network applications
- Concurrent Connection
- Event Driven Communication

Express.js

- Server framework for node.js

CakePHP

- Database Access
- Caching
- Validation
- Authentication

Laravel

- Relational Databases
- MVC Pattern
- Packaging
- Deployment & Maintenance

Twig

- Template Engine
- Combine one or more templates with a data model to produce one or more result documents.

Frameworks (continued)

LWJGL (Light Weight Java Game Library 3)

LibGDX (Cross Platform Game Development)

- Streaming music and sound effect playback for wav, mp3 and ogg files
- Input handling
- Math and Physics
- File I/O and Storage
- Networking

Test Cases

Test Case ID 001	Test Case Description Test Case for adding game levels	
Created By Kong Vue	Reviewed By	Version 1

Use Case
ID: 14

QA Tester's Log

Tester's Name		Date Tested		Test Case (Pass/Fail/Not Executed)	
---------------	--	-------------	--	--	--

S #	Prerequisites:
1	Server has been set up and configured
2	FTP client is installed and configured

S #	Test Data Requirement
1	Game assets are added successfully

Test Conditions

Step #	Step Details	Expected Results	Actual Results	Pass / Fail / Not executed / Suspended / Comments
1	Open FTP client and connect to server	FTP client should connect to server		
2	Upload assets from the host computer	Files should be uploaded to server
